

App changeover easy as pie!

Instructions for
backing up and
reinstalling the
Dräger mCon app
for iOS users

Exciting measurement
technology

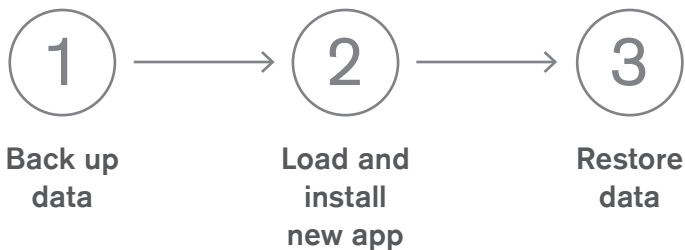

Are you using an iOS device and our Dräger mCon app for measurement data management?

Then, for technical reasons, we unfortunately must ask you to reinstall the app. You can, however, back up your data if you still have it in your app. This only works if you have not yet uninstalled your old app.

Please do not delete your previous Dräger mCon app until you have installed the new app and made a data backup in your previous app.

The following pages show you how to easily back up your existing data and transfer it to the new app.

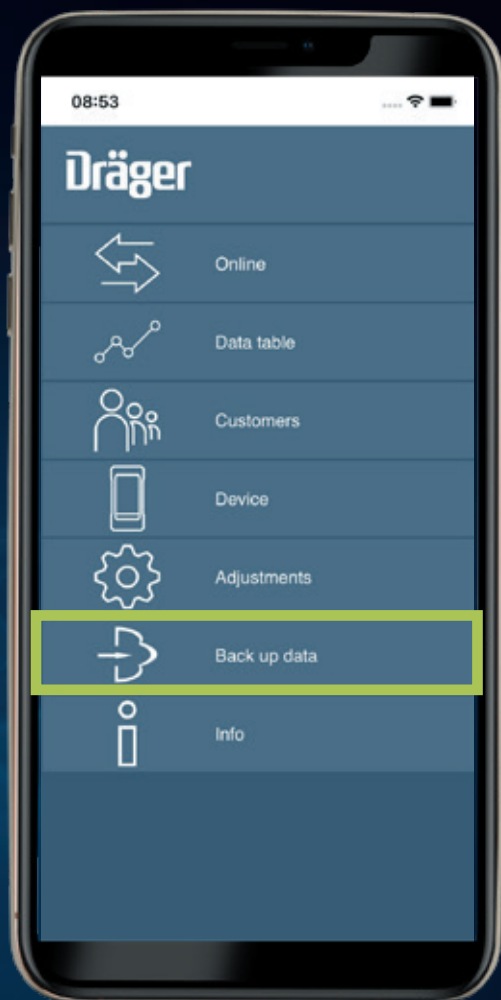

These three steps are necessary:

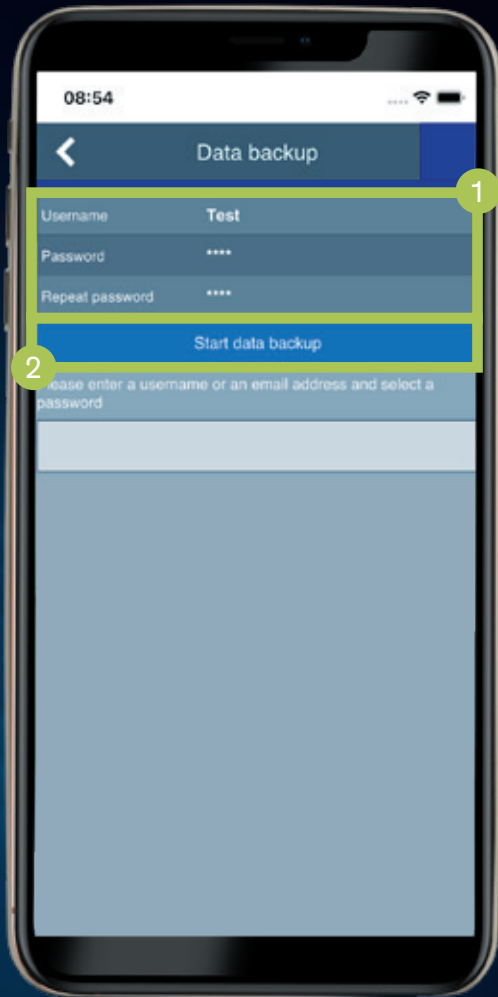

Data backup

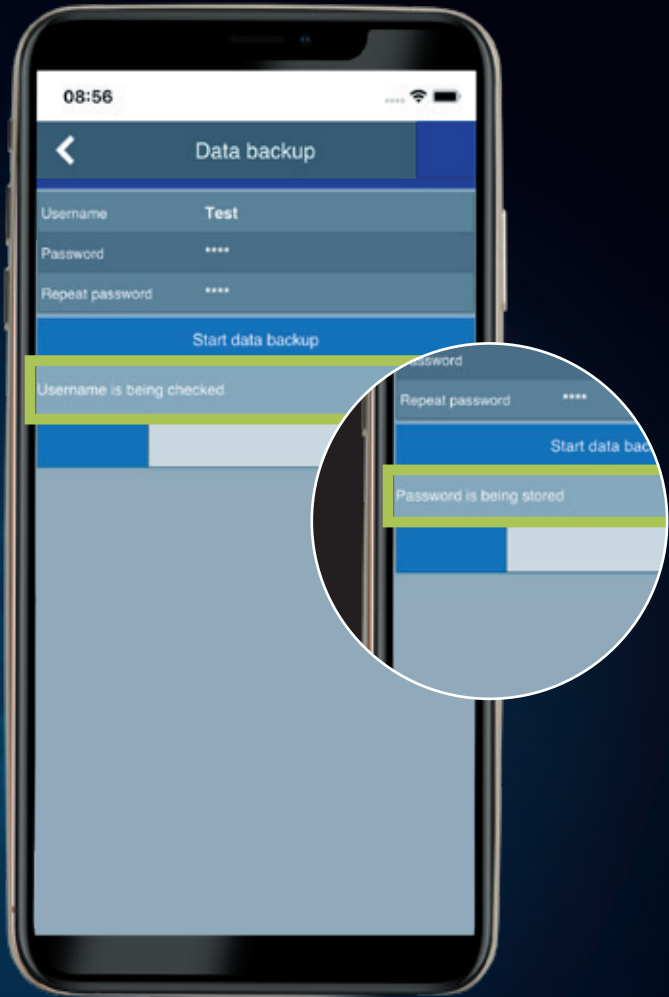

1

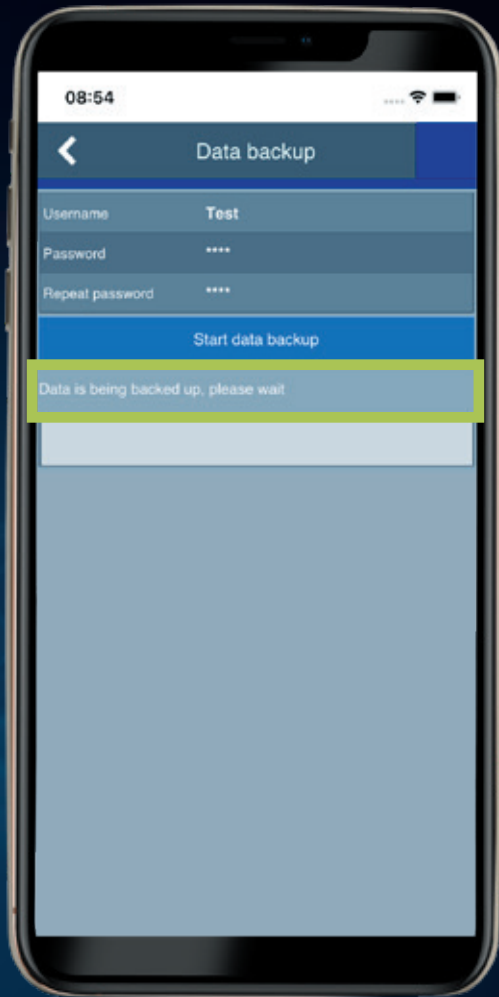

Open the Dräger mCon app and click "Back up data".

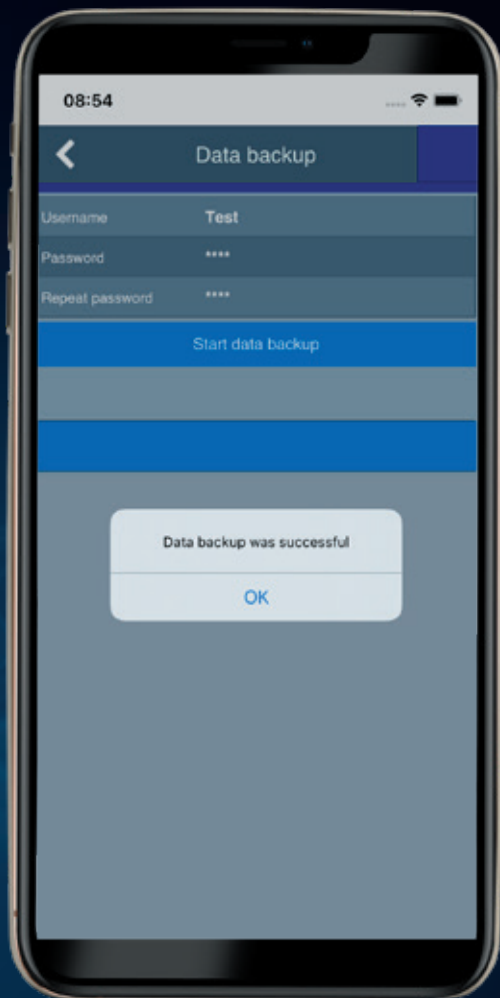

- 1 Please create a username and password now.
- 2 Then start the data backup.

Your username and password will be checked.

The data backup will now run automatically.

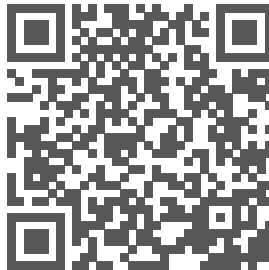

You will receive confirmation that the backup was successful.

Install the
new app

2

Download and install the new Dräger mCon app from the App Store.

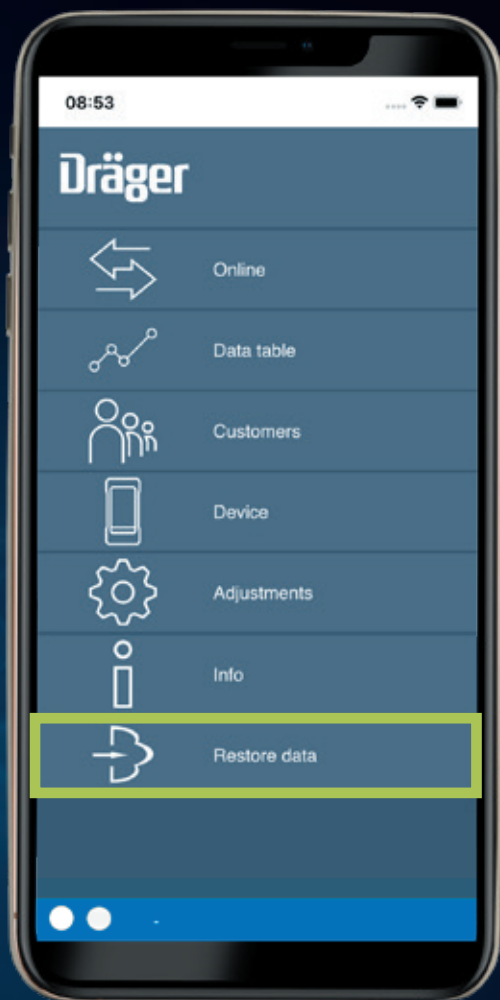

Apple and the Apple logo are trademarks of Apple Inc., which are registered in the USA and other countries.

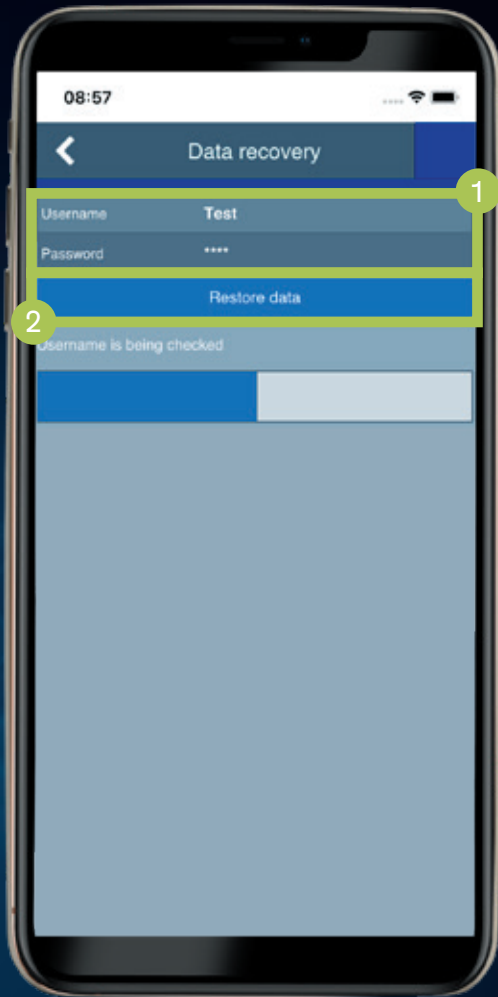

Data recovery

3

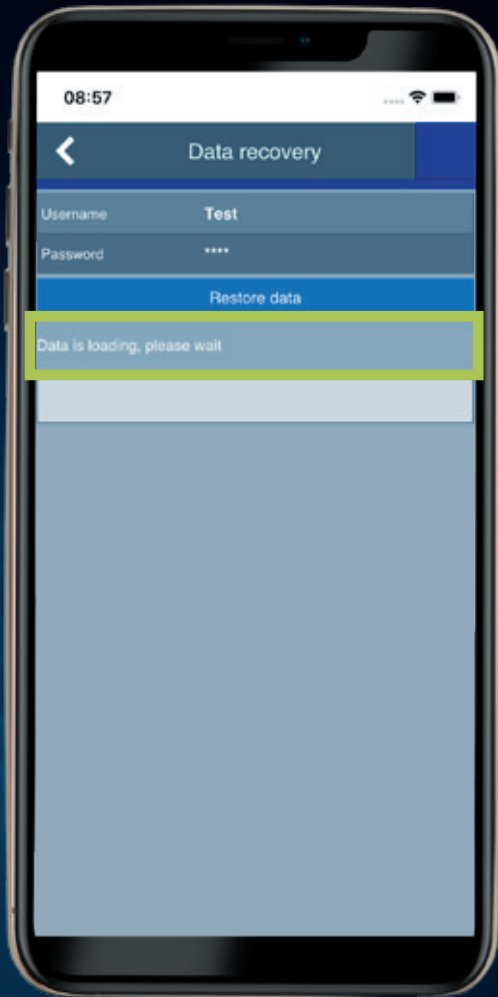

Open the new Dräger mCon app and click “Restore data”.

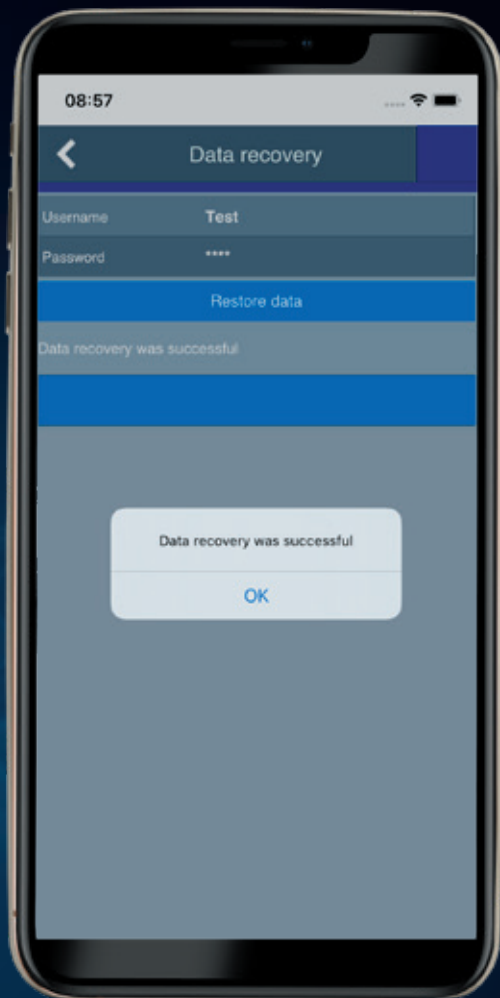

- 1 Enter your username and password.
- 2 Then start the data recovery.

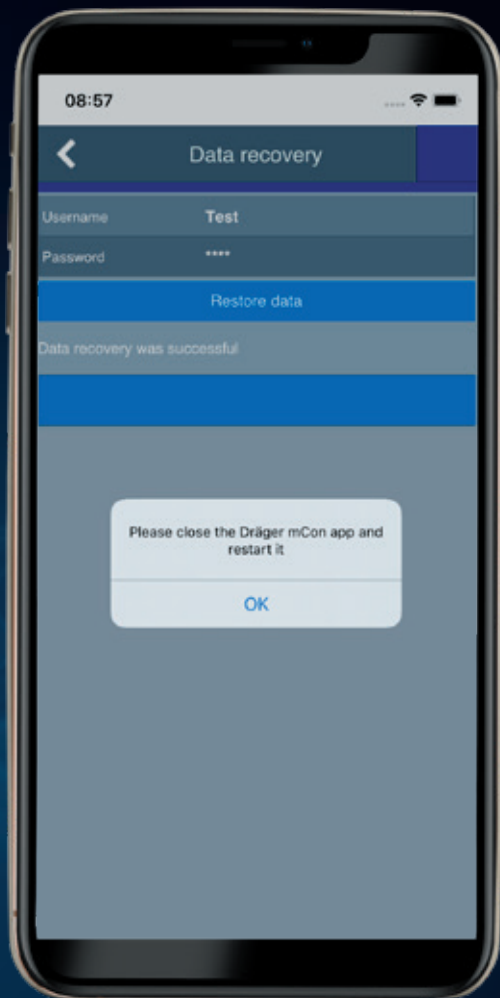

Your username and password will be checked.

The data recovery will now run automatically.

You will receive confirmation that the data recovery was successful.

After successfully restoring the data, you will be prompted to restart the app.

Congratulations!

You can now use the **new Dräger mCon app** and delete your old app.
